

# Technical Product Management (Viticulture) Internship

## About Terraview

Terraview is building an operating system for vineyards to help them tackle the impact of climate change. We use advanced image processing, machine learning, AI and augmented reality to enable vineyards to become future ready. We want to create the most valuable enterprise software company of the 21st century by blending technology with each bottle of wine that the world produces.

## What will you do?

At Terraview, you will be working on precision viticulture using the most cutting edge Machine Learning & AI tools. As a technical product management intern, you will be responsible for the following:

- Working on the Vine Click app by collecting and analyzing samples to improve the accuracy of disease warning and nutrient deficiency prediction model.
- Validating recommendations of the model with your expertise.
- Facilitating the advancement of our in-house data sciences team by providing them with the necessary inputs.

## What will you get?

We offer an opportunity for personal and professional growth, supported by high functioning teams, and exciting challenges that come with joining a company at the start of its growth path. We don't believe in bureaucracy and corporate constraints; we foster a culture where your opinion is highly valued and appreciated.

You will be provided with access to tools and a state-of-the-art platform along with interactions and learning from senior leaders in viticulture, product and data sciences to boost your early career. You will also be offered a competitive stipend for the stint.

## You should apply if you

- are currently enrolled in final or pre-final year an oenology OR viticulture OR plant sciences degree at a top-tier university.
- have a fundamental understanding on viticulture, vine diseases and nutritional deficiencies.
- possess bias for action, problem-solving skills, ability to navigate ambiguity.
- have good communication skills in English (oral and written) - the team is globally distributed.
- possess an interest to build career in the agri-tech space
- can commit 20 hrs/week (part-time) OR 40 hrs/week (full-time) to the role
