

Dr. Matthew Fidelibus is a Cooperative Extension Specialist for the UC Davis Department of Viticulture and Enology. His lab is located in Parlier, Ca at the Kearney Agricultural Research and Extension Center. His laboratory conducts applied and basic research on grapes for raisin, table, and wine. With broad goals to develop or refine cultural practices that: reduce production cost, improve yields and quality, or all of these.

We are looking for students with agricultural backgrounds, who would like to intern with us this Spring and Summer. This job does entail field work and because of the situation with covid-19 we require interns to have their own vehicle and to be able to drive themselves when necessary. On the occasions when you must drive to our field sites, you will be reimbursed. Our work hours are somewhat flexible, but in the summer, we usually work from 6 am to 3 pm. If you are interested, please e-mail a resume to Dr. Fidelibus at [mwfidelibus@ucanr.edu](mailto:mwfidelibus@ucanr.edu)
